

## Conveyor Idler Alignment & Audits

The CPC Engineering Idler Alignment Service is fast becoming the first choice for clients due to easy setup, quick results and fast changes. CPC has quickly resolved tracking issues for clients initially for the short term whilst offering long term solutions.

The CPC Engineering Idler Alignment Service provides:

- The alignment of each idler frame in relation to the centreline of the conveyor.
- The ability to correlate the measurement data with the actual tracking performance of the conveyor to determine the level of influence of any misaligned frames.
- A comprehensive report detailing the frames requiring realignment, by how much and which direction. The report also details other issues identified on the conveyor during the inspection and measurement process.

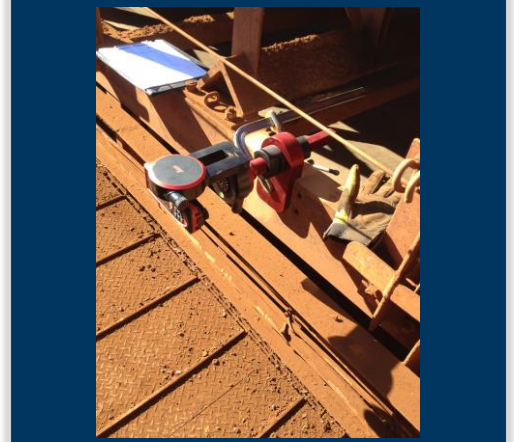

CPC Engineering also carries out conveyor performance and maintenance auditing, "Feed In to Feed Out", together with belt splice quality management inspections and cleaning system audit for all types of conveyors.

### CPC ENGINEERING

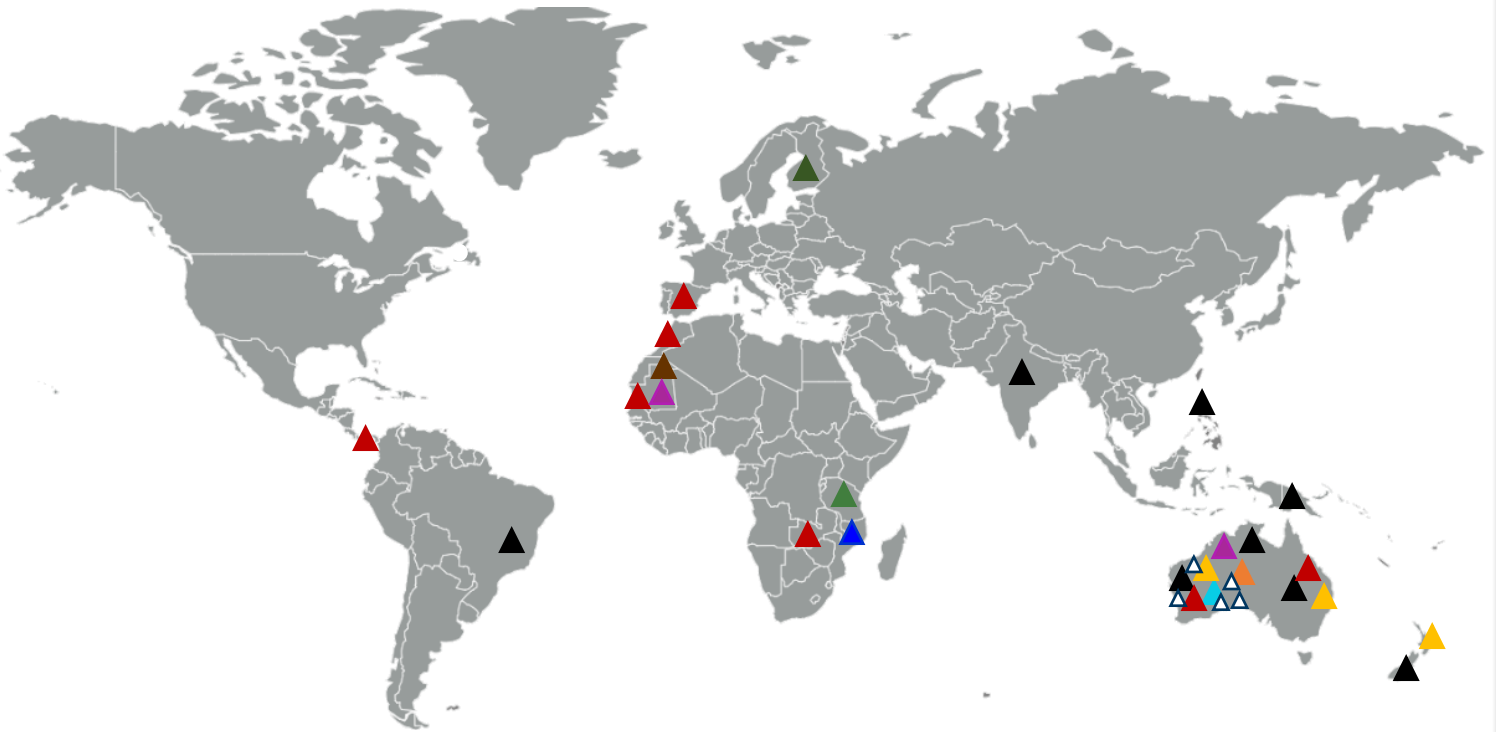

A reputation built over 45 years of expertise and integrity, delivering engineering, construction and maintenance services to the minerals resource sector.

CPC's success is driven by a commitment from our people to add value in everything we do.

CPC employs over 300 personnel in Australia and overseas.

CPC Engineering is committed to taking appropriate measures to protect the safety, health and welfare of its employees, customers, contractors, visitors and the community.
